Outline

1. Deployment

1.1 Replit hosting
1.2 Configure and deploy project

Outline

1. Deployment

1.1 Replit hosting
1.2 Configure and deploy project

Replit

- Sign up an account from: `https://replit.com/signup`

- Create a new Repl:
  - Template: Node.js
  - Title: <repl_name>

Outline

1. Deployment

1.1 Replit hosting
1.2 Configure and deploy project

Configure project

- Update 'server/package.json' file

```
{
  ...,
  "scripts": { "start": "node index.js" },
  ...
}
```

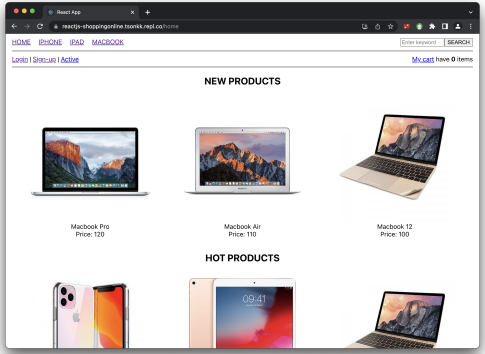
- Update 'server/index.js' file

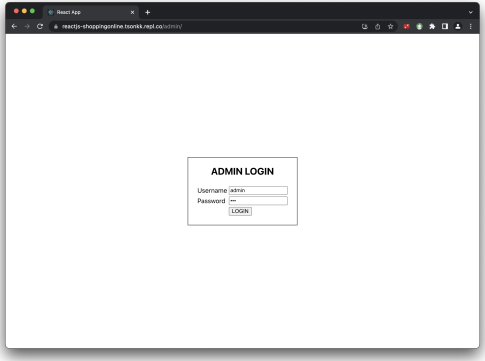
```
...
const path = require('path');
// '/admin' serve the files at client-admin/build/* as static files
app.use('/admin', express.static(path.resolve(__dirname, '../client-admin/
    build')));
app.get('admin/*', (req, res) => {
  res.sendFile(path.resolve(__dirname, '../client-admin/build', 'index.html'))
});
// '/' serve the files at client-customer/build/* as static files
app.use('/', express.static(path.resolve(__dirname, '../client-customer/build'
    )));
app.get('*', (req, res) => {
  res.sendFile(path.resolve(__dirname, '../client-customer/build', 'index.html
      '));
});
```

- Delete 'node_modules' folder on all projects.

Deploy project

- File tab: upload 'server', 'client-admin', 'client-customer' folders.
- Shell tool:

```
<client-admin>$ npm install
<client-admin>$ npm run build
<client-customer>$ npm install
<client-customer>$ npm run build
<server>$ npm install
<server>$ npm start
```




- Webview tool: https://<repl_name>.repl.co
